Fact Sheet
EPiServer Enterprise CMS

In an increasingly information-driven economy, the success of your business is often defined by how efficiently you capture, create, manage and deliver information. By considering a website, portal, intranet or online business application as a means of driving down business costs or improving competitiveness, you have already begun your journey to stand out from the crowd. The inclusion of a Content Management System (CMS) will accelerate you to the forefront of the competitive online market.

Doing Business Online

With EPiServer you can be confident that you have the flexibility of a tailored online solution and robustness of a technology platform developed for the most demanding users. Available for deployment as a website, portal or intranet, there are thousands of websites globally based on EPiServer technology, over 35,000 editors and 600 developers working with the CMS.

Improve your Information Management
Integrating web content management and digital asset management can help your organisation share documents, have discussions and use a common calendar and workspace.

Promote a professional online presence
Extending your brand, market reach and customer service capabilities are key to growing your organisation.

Streamline your business processes
Increasing channel partner, employee and affiliate productivity by streamlining business processes online.

Latest Web Services Technology

Purpose Built For Integration
In order to enable and simplify integration with other systems, EPiServer supports: SOAP, WSDL (web Services Description Language), Windows Workflow and WSRP (web Services for Remote Portlets).

Scalable, Reliable & Based on Standard Products
EPiServer is a scalable solution suited to simple websites or complex sites with several thousand users.

Open Development Standards
ODA stands for Open Development Architecture and its purpose are to make EPiServer more adaptable in order to be able to meet the demands of all customers.

Latest .NET Technology
EPiServer is 100% based on Microsoft .NET, a technology launched by Microsoft to meet the demands that may be placed on technology in the future.

CMS Features

Don't compromise on how efficiently and effectively you manage, share and distribute your online content.

Web-based – no software to install or download, no compatibility issues, all updates occur automatically.

Administer Anywhere – a content manager or author to manage the creation, modification and removal of content from a website without the need for technical expertise.

100% Content Control – you can change design or content elements of your website at any time.

Access & Workflow – control over how content is created, as you can define levels of access and workflow controls.

Multilanguage – choose to publish in multiple languages.

WYSIWYG Editor – page content is created and edited within an easy-to-use Word-like editor, or can be copied and pasted directly from a Word document.

Page Archive – website pages can be saved, hidden, and un-hidden for later re-use.

File Manager – easily upload and manage all the types of files used within your website.

Multi Domain & Platform – publish content and manage your digital assets across multiple domains or intranet/extranet/website environments.

Supported & Updated – the CMS subscription license includes access to new features and versions.

International EPiSERVER Users
By including user logos ARES and EPISERVER does not infer a direct commercial relationship or CMS endorsement.
